

Improving quality of Life

40%

of the power generation capacity is supplied by Siemens

We enable the delivery of

75%

of the UAE's daily water supply

The UAE is embarking on a journey of empowerment at every level. It is dedicated to preserving the fabric of society whilst enhancing the quality of its people's lives.

The nation is measuring its progress through 'The Happiness Index'. This evaluates standard of living through several perspectives. These include perception of income level, average healthy life expectancy, social support, generosity, absence of corruption and freedom of choice. Vision 2021 has set the goal to boost the UAE's Happiness Index ranking to amongst the top five countries in the world and to achieve this they have instated a Minister of State for Happiness.

Improving quality of life means developing world-class power infrastructure and cutting-edge healthcare. This will mean developing reliable power supply and efficient and sustainable energy to meet the growing needs of a growing population. It will also require state-of-the-art healthcare solutions that address the nation's needs.

Other measures such as education about lifestyle diseases, enhanced safety through efficient traffic management and infrastructure solutions will ensure that people have the potential to live healthy, happy and secure lives.

Our technology enables the delivery of key utilities such as power and water and ensures that the roads of the UAE flow safely and efficiently

At Siemens, we believe that happy employees are engaged employees

Our contribution

At Siemens, we believe that happy employees are engaged employees. A positive **83%** of our local employees report that their job gives them a sense of personal fulfilment. Meanwhile, **87%** believe that they have the opportunity for professional development and personal growth.

Health an important factor in ensuring a good quality of life. Siemens Healthineers supplies hospitals and clinics with diagnostic equipment facilitating up to **580** medical decisions per hour. Our technology also supports the UAE's endeavour to further grow the local pharmaceutical industry and keep life-style diseases at bay. Our tailor-made automation solutions support the pristine and efficient production of **40** million vials of insulin in the region's first insulin plant. This means the UAE can ensure that their people have the treatment they need, when they need it.

Lastly, our technology enables the delivery of key utilities such as power and water and ensures that the roads of the UAE flow safely and efficiently. Our technology lights up cities supplying more than **40%** of the UAE's power generation capacity, and we enable the delivery of **75%** of the UAE's daily water supply. Meanwhile, our intelligent transport and mobility solutions work seamlessly and silently in the background to ensure that the people of the UAE smoothly reach their day-to-day destinations.
